Ways to tomorrows district heating Green and more efficient

ERA-net

October 16. 2020 - Jakob Worm - PlanEnergi

What is HEATflex about?

- To provide the district heating sector with useful tools to calculate benefits of selected initiatives:
- Use of waste heat, heatpumps, solar ec. Lowering temperatures in grid
- Expanding grid / getting new costumers and prosumers

Which are the big challenges on heating is your project tackling?

- District heating is a cornerstone of the flexible energy system of the future
- DH must be efficient in order to be even more widespread

- There is a huge potential for utilizing waste heat in a large number of cities. Also in streamlining and flexibility.
- District heating companies are not always aware of the benefits of the possibilities.

Which innovative key results do you expect?

- That a number of companies and planners in the sector will use our tools - and implement the results

In which way are these results ground-breaking on European level and for the national contexts where the project operates?

- HEATflex provides them with easy guidelines and calculation models.

Thank you for your attention
